

Zerava — Frontend Design & Styling Specification (React)

1. Purpose of This Document

This document defines **exactly how the Zerava frontend should look and feel**. Not vibes. Not inspiration boards. Literal visual, structural, and interaction rules.

Anyone reading this should be able to: - Design Zerava screens without guessing - Build the React frontend without aesthetic confusion - Maintain visual consistency as the product grows

Zerava is a **security-focused web app**, not a content site and not a flashy startup landing page. The UI must communicate **precision, seriousness, and trust**.

2. Core Design Philosophy

Zerava's frontend must feel:

- **Professional:** Like a real internal security tool, not a student project
- **Minimal:** No unnecessary decorations or visual noise
- **Technical:** Subtle cues that this is built for people who know what they're doing
- **Calm under pressure:** Even when showing critical findings, the UI stays composed

Avoid: - Loud gradients - Cartoon icons - Excessive animations - "Startup gloss" aesthetics

Think: *modern security dashboard*, not *marketing website*.

3. Color System (Strict)

3.1 Primary Colors

These are derived directly from the Zerava logo.

- **Primary Dark:** #0B0F14 (near-black)
 - Main background
 - Sidebar
 - Header areas
- **Primary Accent:** #1F6FFF (electric blue)
 - Active states
 - Primary buttons
 - Highlights and focus rings

- **Secondary Accent:** #00E5A8 (teal/green)

- Success states
- Low-risk scan indicators

3.2 Neutral Colors

- **Text Primary:** #E6EAF0 (light gray)
- **Text Secondary:** #9AA4B2 (muted gray)
- **Borders / Dividers:** #1C2430
- **Card Background:** #111826

3.3 Status Colors

Use sparingly and consistently:

- **Critical:** #FF4D4F (red)
- **Warning:** #FAAD14 (amber)
- **Info:** #2F80ED (blue)
- **Success:** #27AE60 (green)

No gradients. Flat colors only.

4. Typography

4.1 Font Stack

Primary font: - **Inter** (default)

Fallback: - system-ui - sans-serif

4.2 Font Usage

- Headings: Semi-bold (600)
- Body text: Regular (400)
- Metadata / labels: Medium (500)
- Code or scan output snippets: Monospace (JetBrains Mono or similar)

4.3 Text Behavior

- No oversized headings
 - Tight line spacing
 - Prioritize readability over personality
-

5. Layout Structure

5.1 Global Layout

The app uses a **dashboard layout**:

- Left: Sidebar navigation
- Top: Optional header bar
- Center: Main content area

All layouts must be responsive but desktop-first.

5.2 Sidebar

- Fixed width (240–260px)
- Dark background (#0B0F14)
- Zerava logo at the top
- Navigation items stacked vertically

Navigation items: - Dashboard - Scan - Reports - History - Settings

Active item: - Blue accent bar or glow - Slight background highlight

5.3 Header Bar (Optional)

- Minimal height
- Shows:
 - Current page title
 - User status
 - Notifications (icon only)

No clutter. No search bar unless necessary.

6. Component Design Rules

6.1 Cards

Used heavily for: - Scan summaries - Results - Metrics

Rules: - Rounded corners (8–12px) - Subtle shadow or border - Dark background - Clear separation of title and content

6.2 Buttons

Primary Button

- Blue background
- White text
- Used only for main actions ("Start Scan")

Secondary Button

- Transparent background
- Blue border or text

Danger Button

- Red accent
- Only for destructive actions

Buttons must feel solid, not playful.

6.3 Inputs & Forms

- Dark input fields
- Clear focus state (blue outline)
- Labels always visible
- Helper text muted

No floating labels gimmicks.

6.4 Tables

Used for scan results and logs:

- Fixed header
 - Alternating row backgrounds (subtle)
 - Severity indicated by color dots or tags
 - No zebra stripes with bright contrast
-

7. Icons & Visual Language

- Use **outline icons** only
- Prefer Lucide or similar icon set
- No emojis
- No filled cartoon icons

Icons must support meaning, not decoration.

8. Animations & Motion

Allowed: - Subtle hover transitions - Loading spinners - Progress indicators

Avoid: - Bounce animations - Excessive fades - Anything distracting

Motion exists to **clarify state**, not impress.

9. Pages Overview (Visual Expectations)

9.1 Dashboard

- Overview metrics at the top
- Recent scans list
- Clear risk indicators

9.2 Scan Page

- Simple form
- Target input
- Scan type selector
- Large primary "Start Scan" button

9.3 Results Page

- Summary first
- Detailed findings below
- Severity filtering

9.4 Reports

- Downloadable summaries
 - Clean layout suitable for PDF export
-

10. React Implementation Notes

- Component-based architecture
- Design system enforced via reusable components
- Tailwind or CSS Modules recommended
- No inline styles for core components

Consistency matters more than creativity.

11. Final Rule

If a UI decision makes Zerava look: - Flashy - Playful - Trendy

It is wrong.

Zerava should look like a tool trusted by people who break systems for a living.
